**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 9 and 18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

(claims 9 and 18, line 1) "the stripper belt" is vague, indefinite, and/or confusingly worded because it is not clear which stripper belt applicants are referring to, is it the second stripper belt or the first; etc.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Jeschke et al. (4,344,610).

Jeschke discloses method and device for transporting a flat product comprising a rotating transport cylinder (Fig. 2; via 31) defining an axis of rotation and configured to guide the flat product (via web 1) at a circumference of the cylinder over a first angle of rotation of the cylinder; and a continuous stripper belt (Fig. 2; via 33) disposed between the flat product and the axis of rotation over a second angle of rotation of cylinder and configured to guide the flat

product away from the cylinder so as to strip the flat product from the cylinder, the stripper belt following a continuous path that does not circumscribe the axis of rotation, see for example (Figs. 1 and 2).

Regarding claims 2 and 11: the transport cylinder includes a gripper (via 36) configured to releaseably grip the flat product during the first angle of rotation (Figs. 1 and 2).

Regarding claims 3 and 12: the second angle of rotation includes the first angle of rotation, see for example (Figs. 1 and 2).

Regarding claims 4 and 13: a plurality of belt (9, 28, and 34) guides configured to guide the stripper belt along the continuous path (Figs. 1 and 2).

Regarding claims 5 and 14: the continuous path surrounds at least one half of the circumference of the cylinder (Figs. 1 and 2).

Regarding claims 6 and 15: the cylinder defines a groove in the circumference and wherein the stripper belt is disposed in the groove over at least part of the continuous path, see for example (Figs. 1 and 2), note that the belt go around the cylinder without showing any extra thickness on the cylinder, which is obvious that the belts are located in groove.

Regarding claims 7 and 16: a stripper roller having a second axis of rotation parallel to the axis of rotation of the transport cylinder, the stripper roller disposed adjacent to the transport cylinder (Figs. 1 and 2; via roll 8 and/or 39).

Regarding claims 8 and 17: a second continuous stripper belt (via 34) disposed between the flat product and the axis of rotation over a third angle of rotation of the cylinder and configured to guide the flat product away from the cylinder so as to strip the flat product from

the cylinder, the second stripper belt following a second continuous path that does not circumscribe the axis of rotation, see for example (Figs. 1 and 2).

Regarding claims 9 and 18: "the stripper belt" has a round cross section (Figs. 1 and 2).

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Schneider 4746107, Schmitt 4564470, Bolza 4279410 disclose different method and apparatus for transporting a flat product.
